

Part 7 Review of Graphs, Signed Numbers, Statistics, Probability, and Measurement

Unit 44 Picture Graphs

Unit 45 Signed Numbers

Addition of Signed Numbers

With **like signs**, add the numbers and give the answer the like sign.

$$3 + 5 = 8 \qquad -3 + -5 = -8$$

With **unlike signs**, subtract and give the answer the sign of the larger number.

$$5 + (-3) = 2 \qquad -5 + 3 = -2$$

Subtraction of Signed Numbers

Change the sign of the number being subtracted and add.

$$5 - (+3) = 5 + (-3) = 2$$

$$5 - (-3) = 5 + (+3) = 8$$

$$-5 - (+3) = -5 + (-3) = -8$$

$$-5 - (-3) = -5 + (+3) = -2$$

Absolute Value

- The absolute value of a number is its distance from zero.
- The symbol for absolute value is $| \quad |$.
- $|3| = 3$.
- $|-3| = 3$.

Multiplying Signed Numbers

Rule	Example
$(+)(+) = (+)$	$\rightarrow (4)(5) = 20$
$(+)(-) = (-)$	$\rightarrow (4)(-5) = -20$
$(-)(+) = (-)$	$\rightarrow (-4)(5) = -20$
$(-)(-) = (+)$	$\rightarrow (-4)(-5) = 20$

Dividing Signed Numbers

Rule	Example
$\frac{(+)}{(+)} = +$	$\rightarrow \frac{20}{5} = 4$
$\frac{(+)}{(-)} = -$	$\rightarrow \frac{20}{-5} = -4$
$\frac{(-)}{(+)} = -$	$\rightarrow \frac{-20}{+5} = -4$
$\frac{(-)}{(-)} = +$	$\rightarrow \frac{-20}{-5} = 4$

Unit 46 Coordinate Graphs

1. This is a graph of $x \geq 2$.

The circle over the 2 is filled in because x can equal 2.

2. This is a graph of $x < 1$.

The circle over the 1 is open because x cannot equal 1.

3. A **coordinate graph** contains a horizontal number line (the **x-axis**) and a vertical number line (the **y-axis**).
4. The x and y axes intersect at zero, which is called the **origin**.
5. A point on a plane (graph) is shown by (x,y) .
- A. The number of units it is right or left of origin on the x -axis is x .
- B. The number of units it is up or down from origin on the y -axis is y .

6. To graph $2x + 3$, create a table.

x	$2x + 3 = y$
0	$2(0) + 3 = 3$
1	$2(1) + 3 = 5$
2	$2(2) + 3 = 7$

☆ The number in front of x is the **slope**. It shows the rate the line is increasing or decreasing. A line going down to the right has a negative slope.

Unit 47 Statistics and Probability

Statistics involves summarizing data.

- The **mean** is the average.
- The **median** is the middle number.
- The **mode** is the number that happens most often.
- The **range** of data is the high number - the low number.
- Probability** involves the chance of something happening.

This is the probability of drawing 1 jack from a 52-card deck.

$$P(\text{jacks}) = \frac{\text{Successful Events}}{\text{Total Events}} = \frac{\text{all jacks}}{\text{total cards}} = \frac{4}{52} = \frac{1}{13}$$

Unit 48 Measuring Distance, Weight, and Time

1. Addition and subtraction of everyday measures

$$\begin{array}{r} 3 \text{ ft. } 6 \text{ in.} \\ + 4 \text{ ft. } 8 \text{ in.} \\ \hline 7 \text{ ft. } 14 \text{ in. or } 8 \text{ ft. } 2 \text{ in.} \end{array}$$

$$\begin{array}{r} 23 \quad 16 + 9 = 25 \\ \text{24 lb. } \text{9 oz.} \\ - 8 \text{ lb. } 12 \text{ oz.} \\ \hline 15 \text{ lb. } 13 \text{ oz.} \end{array}$$

Notes: 14 in. = 1 ft. 2 in. borrowing 1 lb. = borrowing 16 oz.

2. Use proportions to change measures.
Change 2.5 miles to feet.

$$\frac{2.5 \text{ mi.}}{1 \text{ mi.}} = \frac{x \text{ ft.}}{5,280 \text{ ft.}}$$

$$\frac{2.5 \text{ mi.}}{1 \text{ mi.}} \times \frac{x \text{ ft.}}{5,280 \text{ ft.}}$$

$$2.5(5,280) = x$$

$$x = 13,200 \text{ ft.}$$

Unit 49 Using the Metric System

- A **meter (length)** is a little longer than a yard.
- A **gram (weight)** is much smaller than an ounce.
- A **liter (volume)** is a little larger than a quart.

$$\text{Milli} = \frac{1}{1,000} \text{ or } .001$$

$$\text{Centi} = \frac{1}{100} \text{ or } .01$$

$$\text{Deci} = \frac{1}{10} \text{ or } .1$$

1 m, g, l

Deca = 10

Hepta = 100

Kilo = 1,000

Conversion "Step" Table

↑ × 10 ↓ ÷ 10

2.5 grams = 250 centigrams

4,000 milligrams = 4 grams
